

CSIE Fellowships

Funding from the US Dept of Education GAANN program has been used to create training-grant fellowships for first-year students interested in adding future faculty development work to their PhD education.

A typical student will take this as:

- full GSRA support in Jan-Aug of their first year
- 50% GSRA/50% GSI in Sept-Dec of their second year

Typical courses (modified by School of Education colleagues to be inclusive of science PhD students):

- designing science learning environments
- educational foundations
- instructional technology in education

plus a chemistry graduate seminar designed to provide post-secondary chemistry context for the CSIE graduate students
